#### **DETAILED ACTION**

In view of newly discovery prior art, the indicated allowable subject matter of claims 1-3, 5-7, 19, and 21-26 has been withdrawn. A new Non-Final rejection set forth below.

### Claim Objections

Claims 24 and 26 are objected to because of the following informalities:

- Claims 24 and 26, line 5 - selective - should be inserted before "disengagement"; and "and re-engagement" should be deleted.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19, 21-24, and 26 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Williams (Patent Number 5,669,336).

Williams discloses a device comprising:

an impeller (24) (See Figure 1);

a drive pulley (28) coupled to the supercharger (See Figure 1, Column 4, line 5-12);

Application/Control Number: 10/698,192 Page 3

Art Unit: 3748

a disengagement device (18) disposed between the impeller (24) and the drive pulley (28) (See Figure 1);

wherein the disengagement device (18) permits selective disengagement between the impeller (24) and the drive pulley (28) (See Figure 1);

wherein the impeller (24) is disengaged from the drive pulley during deceleration (See Figure 1, Column 3, lines 24-26, and Column 4, lines 47-51);

wherein the disengagement device (18) comprises a one-way clutch and is to be a sprag or overrunning clutch (See Figure 1, Column 3, lines 2-11 and lines 43-58);

wherein the disengagement device (18) comprises a speedsensitive mechanism (See Column 3, lines 2-11);

wherein the disengagement device is coupled to the drive pulley (via 14 and 30) (See Figure 1).

Note that Williams does not disclose a supercharger, however, the Williams fan is capable of performing the same function of compressing air as a supercharger does.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Williams (Patent Number 5,669,336), in view of Thompson (Patent Number 2,718,952).

Williams discloses the invention as recited above; however, Williams fails to disclose the disengagement device comprising a centrifugal clutch.

Thompson teaches that it is conventional in the combination art of the centrifugal clutch and pulley structure, to utilize the disengagement device comprising a centrifugal clutch (10) (See Figure 1-3).

It would has been obvious to one having ordinary skill in the art at that time the invention was made, to have utilized the disengagement device comprising a centrifugal clutch, as taught by Thompson, to improve the efficiency of the Williams device.

### Allowable Subject Matter

Claims 1-3 and 5-7 allowed.

#### Conclusion

The IDS (PTO-1449) filed on May 17, 2005 has been considered. An initialized copy is attached hereto.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kerr (US patent Number 6,129,189) discloses a spiral type one-way clutch.

- Waseige (US patent Number 2,077,292) discloses a centrifugal clutch.

- Younggren et al. (US patent Number 6,569,043 B2) disclose a clutch with one-

way torque carrying bearing.

- Burgess (US patent Number 6,637,830 B1) discloses a spinable wheel cover.

- Spase et al. (Patent number 2,678,031) discloses a radiator fan and coolant

impeller speed control mechanism.
